

Notice

Addition of a Project of the Society

THE SCIENCE INFRASTRUCTURES

Document: SCS/NTC/2026/02
Nature: Notice
Status: Issued
Date: October 30, 2026
Authority: Founder, as sole Director during the Initial Period (§14.5 and §14.6 of the Bylaws)
Type: NTC, Notice, under the Document Type Code Standard (SCS/STD/2026/01)

The undersigned, Founder and sole Director of SERENDIP COMMONS SOCIETY (the “Society”), a Delaware nonstock nonprofit corporation, gives notice as follows.

1. Addition. The Society has brought **The Science Infrastructures** under its governance framework as a project of the Society, by Project Approval SCS/PA/2026/05 of October 30, 2026 (the “Approval”).

2. The project. The Science Infrastructures is an open, integrative infrastructure for learning, using and researching the sciences as one connected body of knowledge: foundation libraries of mathematics, computation, physics and inference; one library for each science, tested against published references; and applications that compose them. It was begun on October 21, 2026, before it joined the Society, by Wanhong Huang, who remains its maintainer. Its source is public at <https://github.com/huangwanhong-maker/The-Science-Infrastructures> and in the repositories that page names, and the Society presents it at <https://serendip.ngo/science-infrastructures/>.

3. Classification. The project is classified under Schedule A (SCS/SCH-A/2026/01/Rev.1), Domain I, Theoretical and Ontological, with Domain VI, Educational, and Domain II, Epistemic, as secondary domains.

4. Intellectual property. The Society holds no copyright, patent, database right or other intellectual property in the project, and has no power to relicense it. Each contributor keeps the copyright in what they contributed. This is the default of the Intellectual Property Policy (SCS/POL/2026/01), confirmed for the project by the Approval.

5. Licence and continuity. The project remains open source under the MIT License, in every one of its repositories. Anyone may use, study, change, sell and redistribute it, and fork it and carry it on, with or without the Society, provided the copyright notice and the licence go with it. No permission of the Society is needed for any use, and the licence cannot be withdrawn from a copy already received.

6. Contributions. Contributions are licensed under the same MIT License, to everyone,

when they are submitted, with a sign-off certifying the Developer Certificate of Origin 1.1. No contributor assigns any right or enters any agreement with the Society. Each repository records these terms and its contributors in a file named `CONTRIBUTORS.txt`.

7. The Society's part. The Society is the project's steward. It keeps the project's record, presents it, and reports on it. The technical direction of the project remains with its maintainers, who record their decisions in the project's own decision log.

8. Initial Period. For so long as the Initial Period continues, the project is conducted within Article XIV of the Bylaws: the Society earns no income from it, receives nothing of value from its contributors, and enters no contract with them. The public instances of the project's atlases on the maintainer's server are not an activity of the Society.

9. Verification. The Approval is published as the file named below, with the SHA-256 hash shown:

```
project_approval_science_infrastructures.pdf
922a6bdcc1764beb4388036eedbed3529563200b
0106ec61e47ae85293aba051
```

and this Notice and the Approval are each published with an OpenTimestamps proof, in accordance with SCS/PGD/2026/01, so that their content and date can be verified independently of the Society.

10. Record. This Notice is identified under §5.16 of the Bylaws, placed in the permanent records of the Society, and entered in the monthly working log for October 2026 under §14.14.

ISSUED BY

Wanhong Huang, Founder
Serendip Commons Society
